# How to calculate the DC current of photovoltaic panels

## Overview

---

In this article, I'll review the different current ratings of PV modules and walk you through the process of how to properly calculate the current values as required by the NEC, as well as the resulting requirements on overcurrent protection devices (OCPDs) and conductor. In this article, I'll review the different current ratings of PV modules and walk you through the process of how to properly calculate the current values as required by the NEC, as well as the resulting requirements on overcurrent protection devices (OCPDs) and conductor. The following calculator will help you calculate the DC current (from the controller to the battery) and the AC current (from the inverter to your house). You have to input your solar panel rated power (200w, 300w, 400w, etc. ) and the system overall loss will have a default 22% value, but you could. Power (measured in Watts) is calculated by multiplying the voltage (V) of the module by the current (I). For example, a module rated at producing 20 watts and is described as max power (Pmax). One of the first. Solar Panel Calculator is an online tool used in electrical engineering to estimate the total power output, solar system output voltage and current when the number of solar panel units connected in series or parallel, panel efficiency, total area and total width. The Basic Formula:  $Watts = Volts \times Amps$  The foundation of every power calculation is the equation: To find current.

Electrical Parameters Calculation of The Output of A System Temperature Efficiency & Performance PV Cell Equivalent Circuit See Also To understand the performance of PV modules and arrays it is useful to consider the equivalent circuit. The one shown below is commonly employed. PV module equivalent circuit From the equivalent circuit, we have the following basic equations: At the limits, it is easy to use the equation to determine the open circuit voltage and short circuit current See more on my electrical calculators
