

**PIENAAR ENERGY (PTY) LTD**

# **How to reserve photovoltaic panels when building a house**

## Overview

---

A minimum of 240 square feet (for a 4kW solar system) of unobstructed and unshaded roof space must be reserved for future placement of solar panels, and the area must be marked on the plan set or roof diagram as the 'Solar Roof Area'. In addition to this guide for homebuilders, the Solar Energy Technologies Office (SETO) offers a guide for homeowners who are looking to add solar panels to their home or buy a home with an existing solar system. If you're new to solar power and want to understand how it works, read our guide [here](#). Are you considering building a home for solar energy?

To maximize your solar investment and ensure your system operates at peak efficiency, it is essential to integrate your solar system during the construction phase, not after your home is fully built. This comprehensive guide outlines every step. These tasks may vary according to location due to building codes, utility requirements, and solar installer preferences. At Greenway Solar, we know that planning for solar during construction can yield significant benefits: saving costs, boosting energy efficiency, and reducing environmental impact. Solar integration is becoming an expectation among new construction homebuyers. This guide covers the crucial elements that must be.
