# Hybrid Energy Storage Projects in North America

## Overview

---

This data product presents an annual snapshot of trends in hybrid and co-located power plants, defined as projects that combine two or more generators and/or storage assets at a single point of interconnection. Energy storage projects, particularly battery energy storage systems (BESSs), have flooded interconnection queues across North America “overnight”. It summarizes public empirical data, especially from the U. Energy Information. The Darden Battery Energy Storage System (BESS) is set to become the largest battery storage project in the US once completed. Developed by IP Darden I, LLC, a subsidiary of Intersect Power, the project integrates a 1,150 MW solar photovoltaic facility with 1,150 MW / 4,600 MWh of storage capacity. Its 421,400 photovoltaic (PV) bifacial solar panels are expected to generate over 367 GWh each year, equivalent to avoiding the emissions of over 242,000 tons into the atmosphere annually.
