

**PIENAAR ENERGY (PTY) LTD**

# **Inverter solar self-consumption**

## Overview

---

The self-consumption ratio is the ratio between the PV production and the portion of the PV production consumed by the loads. As net metering policies start to shift in the coming years, a self-consumption setup may be the key to maximizing your solar savings. Why are self-consumption and internal power supply interesting?

In light of the continuing trend towards lower feed-in tariffs, the focus of system design has increasingly shifted away from maximizing PV generation towards intelligent energy management. Made possible by the greater efficiency of today's solar-plus-storage systems, self-consumption is the ability to store energy created at peak times. With over 50 years of experience, we've learned what it takes to build reliable energy storage and self-consumption systems that minimize reliance on the grid.

10 years warranty

### Residential Solar PV Self-consumption

Zero Export self-consumption systems. The self-consumption kit up to 65A (cod. AAX 5015) is required in order to control the PV inverter operation to guarantee that it does not export energy to the grid. ...

## Self-consumption & energy storage

When considering battery capacity, a self-consumption system is able to work with a smaller battery capacity. By day, PV energy is consumed by live loads and any surplus energy is stored in the battery.
