Iron-based liquid flow battery comparison

Overview

This review provides a comprehensive overview of iron-based ARFBs, categorizing them into dissolution-deposition and all-soluble flow battery systems. It provides another pathway in the quest to incorporate intermittent energy sources such as wind and solar energy into the nation's electric grid. The researchers report in Nature. In the evolving scenario of flow battery technologies, the all-iron flow batteries (AIFBs) have attracted much attention and are currently being developed for grid scale energy storage. However, the advancement of various types of iron-based ARFBs is hindered by several critical challenges. A new recipe provides a pathway to a safe, economical, water-based, flow battery made with Earth-abundant materials RICHLAND, Wash. Electrolyte Chemistry: Iron-chloride or iron-salt solutions are cheaper than vanadium.
