

PIENAAR ENERGY (PTY) LTD

Is direct sales or distribution better for photovoltaic panels

12V 10AH

Overview

While direct sales might be easier to control from the start, distributor sales gives you a chance to move into new markets quickly and expand your reach without a hefty start-up cost. And it doesn't even have to be difficult or challenging. Is working with a local solar retailer really the best option?

Or could purchasing directly from manufacturers be the key to maximizing your investment?

This comprehensive guide cuts through the marketing hype to reveal what solar companies don't want you to know: identical panels from the same. Whether working directly with manufacturers or through authorized distributors or traders, the key to success lies in transparency, proper due diligence, and creating value-aligned relationships that benefit all parties. After all, you are solving an immediate issue for. Two common models are using distributors or opting for direct sales. Distributors act as intermediaries. Direct Answer: Centralized photovoltaic systems are large-scale solar installations that generate electricity for wide distribution through the electrical grid, while distributed/household photovoltaic systems are smaller installations located at or near the point of energy consumption.
