# **Is it okay to install water tanks on photovoltaic panels**

## Overview

---

Pairing solar panels with unconventional surfaces like convex water tanks. But wait, can these two systems truly work in harmony?

Let's break down the technical realities and innovative approaches making this possible. Convex tanks create unique installation hurdles. simplest/cheapest is to get a DC immersion heater and match it to PV panels to be close to MPP. I'd need a temp probe and a relay/mosfet to cut power when water temperature reaches upper limit. Not only do these systems significantly reduce utility costs—by as much as 80%—but they also foster energy. Electricity that you produce yourself by using a photovoltaic system is cheaper than electricity from the power grid. Think of it like adding a turbocharger to your electric vehicle - same basic concept, but suddenly you're getting way more bang for your buc Let's. If you need a water pump for either of these two reasons, you might be wondering how to connect a solar panel to a water pump?

Solar power is a logical power source for a few additional reasons: The well is rural, and there is not a grid-tied power supply available.
