

**PIENAAR ENERGY (PTY) LTD**

# **Is it suitable to grow peppers under photovoltaic panels**

## Overview

---

Numerous vegetables are particularly suitable for cultivation under solar energy systems. Common examples include tomatoes, peppers, cucumbers, leafy greens, carrots, and radishes. Utilizing solar technology allows sustainable farming. Scientists have built in India a 1.8 kW agrivoltaic setup to grow peppers under the PV modules. The proposed project design is described as an agrivoltaic insect net house that could be used for all crops that require rigorous pest management. The recent literatures for applications of selective shading systems on the aforementioned crops and other plants in combination with solar production.

## Is it suitable to grow peppers under photovoltaic panels

### What vegetables are suitable for growing under solar energy?

Numerous vegetables are particularly suitable for cultivation under solar energy systems. Common examples include tomatoes, peppers, cucumbers, leafy greens, carrots, and radishes.
