# **Is the photovoltaic panel meter box harmful**

## Overview

---

Despite their advantages, many users have expressed their concern regarding the possibility that they emit harmful radiation. However, this is a misconception. Little do people know that solar energy systems can be dangerous to their health, due to the EMF's emitted. Just one of scores of health impacts can be increased cancer risk. EMF stands for manmade "electromagnetic field (s)", such as produce unnatural electric, magnetic, or rf (microwave). The real issue is that the solar panel system, or photovoltaic system, creates dirty electricity that ultimately radiates EMF radiation into the home. Now, let's dive a little. Solar panels do emit EMF radiation to some degree except at night or when not in use. However, while the EMF radiation levels given off by solar panels has been marked as safe, those who are sensitive to EMF radiation may still be affected by it. It's a fair question - we're talking about electrical systems on your roof, after all. Non-ionizing radiation includes electromagnetic fields (EMFs) from various household devices like Wi-Fi routers, mobile phones, and microwaves.
