Israel energy transition

Overview

Israel has unveiled an ambitious 10-year National Energy Efficiency Plan designed to curb energy demand, reduce emissions, and accelerate the country's transition toward a cleaner power system by 2030. A STATION OF wind turbines in the Golan Heights. Israel is on track to meet its goal of, by 2030, producing a third of its electricity through renewable sources, Energy and. Israel is a geo-political energy island, with a fairly high population density, a high rate of population growth, a diminution of open spaces in central Israel, large natural gas reserves, and the potential to produce electricity from the sun's energy, but with little opportunities for producing. Most energy in Israel comes from fossil fuels. Total primary energy consumption was 304 TWh (1. 2 million tonne of. For Israel, this transition presents both opportunities and challenges, touching on energy security, economic resilience, and its geopolitical standing in a changing world. Currently, only 14% of Israel's electricity is generated from renewables like wind and solar, starkly contrasting with the European Union, where 48% of electricity came from.
