

**PIENAAR ENERGY (PTY) LTD**

# Italian solar tracking system

## Overview

---

The project will use advanced AI technology to optimize the positioning of solar panels throughout the day. By constantly adjusting the panels to follow the sun's path, Solargik's trackers maximize solar energy capture and significantly increase overall energy production. Featuring three independent 1MW single-axis tracking arrays, this project utilizes a multi-point drive design with high-strength magnesium-aluminum-zinc. Solargik, a provider of advanced solar tracking systems, has secured contracts to deliver its AI-driven SOMA Pro tracker system to 85 megawatts of new solar projects across Italy. The perfect solar tracker for your company. Design and build your photovoltaic system with help from our team of experts. Balanced with a high moment of. Jerusalem and Milan, J(8:30 AM CET) – Solargik, a global pioneer in photovoltaic terrain-adaptive energy solutions today announced the signing of 85 megawatts (MW) in new utility-scale solar projects across Italy, marking a significant step in opening up solar deployment in areas long. Solargik, a global pioneer in photovoltaic terrain-adaptive energy solutions, has announced the signing of 85 MW in new utility scale solar projects across Italy, marking a significant step in opening up solar deployment in areas long considered too steep, constrained, or regulated for viable.
