

PIENAAR ENERGY (PTY) LTD

Latest solar utilization rate of solar panels

Overview

The utilization rate of solar panels in the United States is approximately 3.3% of the total electricity generation, 2. In 2024, the US solar industry installed nearly 50 gigawatts direct current (GWdc) of capacity, a 21% increase from 2023. Solar accounted for 66% of all new electricity-generating capacity added to the US grid in 2024, as the Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U. The focus is on ground-mounted systems larger than 5M AC, including photovoltaic (PV) standalone and PV+battery hybrid projects (smaller projects are covered in Berkeley Lab's. In the last decade, solar has grown with an average annual rate of 26 percent, reaching a capacity of over 138 gigawatts in 2023. Net-metering policies, solar tax credits, and building code improvements are making residential adoption easier. 2 TW dc • China continued to dominate the global market, representing ~60% of 2024 installs, up 52% y/y. • The IEA reported Pakistan's rapid rise to fourth place in annual global PV.
