Lead-acid battery cabinet precautions

Overview

For indoor use, precautions must be taken. Ensure the environment is well-ventilated. Avoid storing lead acid batteries in high-temperature areas, as heat can accelerate their degradation. Rinse the affected area immediately with large amounts of water if acid gets on your skin. Seek medical attention if the chemical burn appears to be second degree or greater. The system's output may be able to be placed into an electrically safe work condition (ESWC), however there is essentially no way to place an operating battery or cell into an ESWC.
