

**PIENAAR ENERGY (PTY) LTD**

# **Liquid cooling energy storage to prevent explosion**

## Overview

---

By submerging batteries in a dielectric liquid coolant, this innovative technology prevents fires, enhances system efficiency, and ensures long-term safety and reliability across diverse applications. These systems are critical for integrating renewable energy sources into the grid, ensuring reliability and stability. However, safety concerns, particularly the risk of fires caused by thermal runaway, pose significant challenges. High-profile incidents, such as the fire at the Moss Landing Energy. Energy technology specialist Etica Battery has developed an immersion cooling system which it says can help stop Battery Energy Storage Systems (BESS) going into thermal runaway and catching fire. Lithium-ion battery fires typically originate from several core risk factors. These factors compromise battery stability and can trigger. Energy storage systems (ESS) are being installed in the United States and all over the world at an accelerating rate, and the majority of these installations use lithium-ion-based battery technology.
