# London restricts solar glass

## Overview

---

Solar control glass consists of layers of special material on the glass, invisible to the eye, which repels solar heat but lets the sunlight in. This major energy saving benefit, in hot conditions, reduces the need for cooling systems. Solar control glass can be an attractive feature of a building whilst at the same time minimising, or even eliminating the need for an air conditioning system, reducing running costs of the building and saving energy. In hot climates, solar control glass can be used to minimise solar heat gain and. Solar control glass emerges as a pivotal solution in this regard, offering a blend of indoor temperature regulation, energy savings, and aesthetic versatility. Designed to regulate heat and light, this innovative glazing option is widely used to enhance comfort, improve energy efficiency, and create visually. Keeping the indoors cool, but still light and airy, solar control glass allows sunlight to pass through windows, reflecting and radiating a large amount of the heat away. It is suitable for windows, glass facades and roof designs for which it is most appropriate for modern architecture.

## London restricts solar glass

---

### Solar Control

To combat this, a range of solar control glazing options are available. Solar gain is measured in g-values, and the lower this number, the better the glazing's solar control performance. For example, ...
