**Lusaka battery energy storage
total electricity consumption**

Overview

The 54-megawatt (MW) plant is expected to supply as many as 30,000 households and several businesses with electricity. This is particularly important in Zambia, where one-fifth of the population lives in rural areas. If you want to install the EverVolt or EverVolt 2.0 as part of a solar-plus-storage system, battery costs are a significant factor. That's the vision behind the Lusaka Digital Energy Storage System, Zambia's \$48 million answer to energy instability. As African nations grapple with growing energy demands, this lithium-ion battery marvel – big enough to power 15,000 homes for 6 hours – is rewriting the rules of urban power. With 40% of African businesses experiencing regular power outages according to World Bank data, reliable energy storage systems have become critical infrastructure. In May 2023, we launched our largest European battery-based energy storage project at the Antwerp platform in Belgium. With its 40 containers, the site will develop a capacity of 75 MWh, which is equivalent to the daily consumption of a small country. 12kWh battery and 8 solar panels.
