

PIENAAR ENERGY (PTY) LTD

Microgrid sells electricity to itself

Overview

A microgrid is a self-contained electrical network that allows you to generate your own electricity on-site and use it when you need it most. [2][3] Microgrids may be linked as a cluster or operated as stand-alone or isolated microgrid which only operates. A microgrid is a local grid that can run connected to the main grid or independently during outages. Department of Energy (DOE), it is a controllable entity managing.

Microgrid sells electricity to itself

Microgrids: How They Work

Unlike the utility grid, which generates electricity in a centralized power plant and then distributes it along hundreds of miles of transmission lines, a microgrid generates electricity on-site.
