

PIENAAR ENERGY (PTY) LTD

Microgrids norway

Overview

These include solar panels, wind generators, electric vehicles, low-, medium-, and high-voltage grids, storage, power electronics and much more. A microgrid can be constructed in a variety of configurations and tested. The energy system (generation, transmission, demand) will become more decentralised with production taking place closer to customers and involving technologies such as solar panels, fuel cells, micro-turbines, storage and combined heat and power systems. Their commitment to integrated solar energy applications highlights their role as a specialist in delivering reliable. The Norwegian Smartgrid Centre is a national centre of competence for smartgrids. Our vision is to create one of Europe's most dynamic research alliances that brings together industry and research partners for the development of flexible and intelligent electrical energy systems. It is usually connected to a traditional centralized grid (macrogrid) but can a consumer buys.
