# **Microporous cast-in-place piles for photovoltaic support**

## Overview

---

Micropiles are small diameter, bored cast-in-place piles, with most of the applied load being resisted by skin friction. They can also be designed to be end bearing piles. They are constructed by drilling a borehole, often using steel casing, then placing steel reinforcement and grouting the hole. KYZ-1, KYZ-2, and KYZ-3 with their lengths  $L_p$  of 52. in the. e (PHC piles), steel piles and steel pipe screw piles. The study confirms the reliability of the PHC pile foundation as a support structure for heliostats, aiming to offer valuable insights for practical a voltaic. vely by Kulhawy (1985) and Trautmann & Kulhawy (1988). Driven piles are an attractive foundation alternative for ground mount solar panel systems since the materials are readily available and Contractors are familiar with th nother critical factor in selecting the type of pile.
