

**PIENAAR ENERGY (PTY) LTD**

# **Model of Maoshuo photovoltaic grid-connected inverter**

## Overview

---

Based on the nonlinear characteristics of photovoltaic arrays and switching devices, we established a nonlinear model of photovoltaic grid-connected inverters using the state space method and solved its model predictive controller. A three-phase photovoltaic inverter is presented. The inductor resistance of the system that is connected to the electrical grid is 39,40. It consists of solar panels in a range of DC. The single-phase transformerless PV inverters have become an industrial technology for a long time in grid integration of solar plants. Due to renewable energy's intermittency, it must be stabilized. A model predictive control method can improve control accuracy and dynamic performance.

## Model of Maoshuo photovoltaic grid-connected inverter

---

### Maoshuo Electric Photovoltaic Grid-connected Inverter

This article presents commonly used multilevel inverter technologies for grid-connected PV applications, including five-level inverters, single-phase nonisolated inverters,
