

PIENAAR ENERGY (PTY) LTD

Mountain double-track photovoltaic panel transportation

Overview

A train developed by Swiss track maintenance company Scheuchzer will travel along the rails, laying photovoltaic panels as it goes. The train uses a piston mechanism to unfurl the one-metre-wide panels, pre-assembled at a Swiss factory, at a forecast up to 1,000sq m per. Swiss startup Sun-Ways is looking to do just that by installing solar panels in between railway tracks. Despite many household and business rooftops rocking solar panels, and dedicated "farms" also soaking up the Sun's energy, there's still huge potential for harvesting much more. Sun-ways is. But Sun-Ways is the first to patent a removable system, with the help of EPFL, the Swiss federal technology institute in Lausanne. The removable PV system will be tested. There are hundreds of thousands of miles of highway dividers and thousands of acres at highway interchanges that could serve as areas to mount solar panels. Covering irrigation canals, lakes, and even parts of the ocean with panels is also under consideration.
