Multicrystalline photovoltaic panels have color difference

Overview

While monocrystalline panels are typically black and multicrystalline panels are usually blue, the color does not affect their performance. Most solar panels have a blue hue, although some panels are black. The source of this color difference comes from how light interacts with two types of solar panels: monocrystalline and polycrystalline. Color: Blue with a speckled appearance.

Multicrystalline photovoltaic panels have color difference

Monocrystalline vs. Polycrystalline Solar Panels: Which Is Better?

Polycrystalline solar panels (also known as multi-crystalline or poly panels) are made by melting multiple silicon crystals together. They are then molded into square-shaped ingots and cut ...
