# **Nano solar power generation system**

## Overview

---

This review explores the role of nanomaterials in improving solar energy harvesting systems, including solar collectors, fuel cells, photocatalytic systems, and photovoltaic cells. The worldwide technical capacity of solar energy significantly surpasses the current overall primary energy requirement. 6% heating efficiency) and stretchability (1072%) in saline environment. Bio-based solar-driven ionic power generation. Nanotechnology can help to address the existing efficiency hurdles and greatly increase the generation and storage of solar energy.
