

PIENAAR ENERGY (PTY) LTD

Offshore wind power generation and onshore wind power generation costs

Overview

Onshore wind projects typically involve capital costs ranging from \$1,000–1,700 per kW. Operational expenditures are lower for onshore turbines. The 13th annual Cost of Wind Energy Review uses representative utility-scale and distributed wind energy projects to estimate the levelized cost of energy (LCOE) for land-based and offshore wind power plants in the United States. – Data and results are derived from 2023 commissioned plants. This comprehensive analysis, compiled from IRENA's extensive renewable cost database of over 25,000 projects, highlights how 91% of newly commissioned utility-scale renewable capacity in 2024 delivered power at a lower cost than the cheapest new fossil fuel-fired alternative.

Offshore wind power generation and onshore wind power generation

Cost of Wind Energy Review: 2024 Edition

The 13th annual Cost of Wind Energy Review uses representative utility-scale and distributed wind energy projects to estimate the levelized cost of energy (LCOE) for land-based and offshore wind ...

THE COST OF OFFSHORE WIND POWER

Compared to electricity from large scale land-based wind parks and solar photovoltaic parks, offshore wind electricity is more expensive. However, offshore wind is a relatively new developing industrial ...

Onshore vs Offshore Wind Energy - What You Need to Know in 2025

Onshore wind projects typically involve capital costs ranging from \$1,000-1,700 per kW. In contrast, offshore installations can exceed \$3,000-5,000/kW.
