

PIENAAR ENERGY (PTY) LTD

Optical-to-electrical outdoor power supply

Overview

The optical power supply operates by employing high-power laser diodes to generate intense light beams, which are then directed through fiber optic cables with minimal loss. At the receiving end, specialized photovoltaic cells capture and convert the light energy back into usable. The TIA-525 and 952 series have BNC outputs for direct connection to your oscilloscope or digitizer. The TIA-1200 and 3000 use a type K SMA female output connector. From the core to the edge, your network is adding connected devices and new smart-building services all the time. The opportunities and efficiencies they offer speak for themselves—but, as they spread to locations both indoors and out, you're probably feeling the crunch caused by not having enough. The device converts optical power to electrical power for applications that require complete electrical isolation in highly demanding industrial environments and applications. Choose from 1 or 2 channels, AC or DC coupling and various conversion gain and operating wavelength ranges. The O2E is available in compact MATRIQ™. Check each product page for other buying options. The devices are ideal for powering.

Optical-to-electrical outdoor power supply

Slimline Riser Indoor/Outdoor PLTC Hybrid Powered Fiber Cables

Specifically designed for indoor/outdoor installations that utilize a centralized power supply to remote power and devices, thus eliminating the need to provide local AC power to each location.
