

**PIENAAR ENERGY (PTY) LTD**

# **P-level photovoltaic panels**

## Overview

---

P-type solar panels are the most commonly sold and popular type of modules in the market. The aforementioned aspects are quite important, but choosing a photovoltaic (PV) module featuring a P-type solar cell or an N-type solar cell, can make the difference in the performance and lifespan of the module. In this article, we will explain to you the structure of both types of solar cells. N-type solar panels are starting to become more popular because they provide the major advantage of not being susceptible to light-induced degradation as P-type solar panels have been discovered to be. While both generate electricity when exposed to sunlight, N-type and P-type solar cells have some key. If you work in solar you are destined to hear or come across the term P50 or P90 or P99. This, at first, is a very confusing concept. The 'P' stands for Probability and the number trailing it is the probability level (e. Working Principle: The working of solar cells involves light photons creating electron-hole pairs at the p-n.
