

PIENAAR ENERGY (PTY) LTD

Pakistan s integrated communication base station energy storage system

Overview

This study presents a thorough techno-economic optimization framework for implementing renewable-dominated hybrid standalone systems for the base transceiver station (BTS) encapsulation telecom sector in Pakistan. The study focuses on ensuring grid reliability. Pakistan's power sector is undergoing a rapid transformation driven by the adoption of variable renewable energy (VRE), electric vehicles, and distributed generation. However, the surge in distributed generation, amplified through rooftop solar adoption, is driven by high electricity costs and declining solar component prices. Consumers are combining solar with Battery Energy Storage Systems (BESS) to reduce grid dependence, lower energy bills, and improve reliability. The increase in costs is due to surcharges and duties on lithium-ion batteries. Even on less sunny days, storage systems ensure uninterrupted base station operation while minimizing dependence on the grid.

ISLAMABAD, Sep 10 (APP): Energy experts, industry professionals and policy analysts on Wednesday said that battery storage can play a transformative role in stabilizing the national grid, reducing load-shedding, and enabling the transition to a cleaner and more resilient energy system. They shared these views at a seminar organized.
