

PIENAAR ENERGY (PTY) LTD

Palestine microgrid applications

Overview

The present paper details two case studies from Palestine and shows the inter-relation between energy, water and food in rural areas to demonstrate how the availability of sustainable energy can ensure water availability, improve agricultural productivity and increase food security. This paper presents a programme of rural electrification with PV hybrid micro-grids for remote villages in Palestine, dealing with all the issues as techno-economical, the creation of the legal framework and the operation and maintenance. These systems may have the potential to provide rural electrification and encourage rural development, as PV panels are now becoming more financially. This paper present the techno-economic impact of electrification of small communities by using micro-grid photovoltaic (PV) systems, and also reduction in CO2 emission in comparison to using diesel generator which causes high rates of environ-mental pollution will be analyzed. This is the second in a two-part series (read Part 1 here).
