

**PIENAAR ENERGY (PTY) LTD**

# **Pet photovoltaic panel production**

## Overview

---

With solar installations projected to reach 3.5 TW globally by 2030, PET films serve critical roles in PV module manufacturing, particularly as backsheets and encapsulants. Their lightweight, durable, and weather-resistant properties align with the need for cost-efficient. The photovoltaic sector is going through an unheard-of development as a result of the growing global interest in and need for sustainable energy. Solar backsheet materials are an essential part of solar modules and are important for enhancing photovoltaic conversion efficiency, lowering prices, and. Rising global demand for solar energy infrastructure is a primary driver for polyester PET films in the photovoltaic (PV) sector. I need the full data tables, segment breakdown, and competitive landscape for detailed regional analysis and revenue estimates. 8 billion by 2032, at a compound annual growth rate (CAGR) of 9.
