

PIENAAR ENERGY (PTY) LTD

Photovoltaic panel household battery large size

Overview

When choosing a solar battery for your residence, it is recommended to consider a 47 kWh capacity, though this may vary based on battery efficiency and Depth of Discharge (DoD). That's an approximate value if you plan to completely offset your dependence on electric grids. Battery sizing is goal-driven: Emergency backup requires 10-20 kWh, bill optimization needs 20-40 kWh, while energy independence demands 50+ kWh. Your primary use case should drive capacity decisions, not maximum theoretical needs. Use a battery bank size calculator to get precise measurements based on daily energy. In this article, you'll find simple guidelines to help you determine the perfect battery size for your home, making your solar journey smoother and more efficient.
