

**PIENAAR ENERGY (PTY) LTD**

# **Photovoltaic panel lamination job requirements**

 **LFP 280Ah C&I**

## Overview

---

During the lamination process, the prepared 5-layer module is placed in the lamination machine and heated to the max. 135°C for a period of approx. This machine uses heat and pressure to stick different layers of the photovoltaic module together. Solar cells. PV module lamination is a key step in solar panel manufacturing, as it affects the longevity, reliability, and performance of the module. It also provides an example of a typical cycle time for EVA/POE lamination.

## Photovoltaic panel lamination job requirements

---

### Solar Panel Lamination Process and Importance

Its main job is to seal and protect solar cells so the panel can work safely for 25+ years. Think of it like laminating an ID card -- but on an industrial level. 1. What Is a Laminator?
