Overview

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. Understanding how. At a high level, solar panels are made up of solar cells, which absorb sunlight. Here's a deeper look into the full process: To find out how solar power works, you need to. The photovoltaic effect, which is the process of converting sunlight into electricity, was first discovered in 1839 by French physicist Alexandre Edmond Becquerel. Over the years, scientists refined this discovery, leading to the first silicon solar cell in 1954. That innovation paved the way for.
