

## Overview

---

To power your home's standard appliances, you need to connect solar panels to inverter units that convert DC electricity into AC. It's a device that converts direct current (DC) electricity, which is what a solar panel generates, to alternating current (AC) electricity, which the electrical grid uses. In DC, electricity is maintained at. When installing a solar panel system, the most common question is: do you need an inverter for solar panels?

The answer is—yes, most of the time. But the "why" and "when" depend on your energy system, objectives, and types of appliances you want to power. We at Polar ESS understand that choosing the.
