

PIENAAR ENERGY (PTY) LTD

Photovoltaic steel support quality

Overview

Choose high-quality steel with strong strength and toughness to ensure your PV panel support lasts long and withstands harsh weather. Use galvanized coatings and weather protection to prevent rust and extend the life of your steel structure with minimal maintenance. Steel remains the most widely used material in solar photovoltaic support structures, accounting for 78% of global installations according to 2023 market data. Let's break down its advantages: "A solar array is only as reliable as its support structure – steel provides the necessary resilience for. Poor-quality steel, often chosen to cut short-term costs, corrodes faster, weakens under load, and becomes a liability in a system designed for 25 years or more. By contrast, premium-grade, galvanized or coated steel can ensure mechanical stability and protect against corrosion, wind shear, and. This is why professionals rely on ZM Ecoprotect® Solar: Our high-quality zinc-aluminum-magnesium-coated steels for effectively protecting high-performance stud framing from corrosion.

Photovoltaic steel support quality

8 Must-Have Features for Durable Steel Structures Supporting PV ...

Choose high-quality steel with strong strength and toughness to ensure your PV panel support lasts long and withstands harsh weather. Use galvanized coatings and weather protection to ...
