Power station generator frequency and voltage

Overview

Both voltage and frequency depend on the generator's engine speed and internal regulation systems. The Standard Split: North America operates on 60 Hz; most of the rest of the world uses 50 Hz. Mismatching these leads to catastrophic equipment failure. Acceptable Range: Excessive deviations can damage electronics, cause motors to overheat, or prevent. To set protection such that generating resource(s) remain connected during defined frequency and voltage excursions in support of the Bulk Electric System (BES).
