Overview

In 2025, a 5 kW solar panel system costs around \$13,550 before incentives, based on real installation data from across the country. But your actual price will depend on factors like your roof's complexity, local labor costs, the equipment you choose, and what incentives are. The 5th generation solar panels are characterized by significant technological advancements and sustainability features, leading to a varied price range. Typically, the cost of these panels aligns between \$250 to \$400 per panel, influenced by factors such as efficiency ratings and brand. Average price of solar modules, expressed in US dollars per watt, adjusted for inflation. Data source: IRENA (2025); Nemet (2009); Farmer and Lafond (2016) - Learn more about this data Note: Costs are expressed in constant 2024 US\$ per watt. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs. Solar panels can lower your electricity bill by 75% or more, but the upfront investment is significant. This work has grown to include cost models for solar-plus-storage systems.
