

**PIENAAR ENERGY (PTY) LTD**

# **Prices for emergency energy storage in western europe**

## Overview

---

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030. The German energy storage market is expected to grow rapidly from 8 GW in 2023 to 38 GW in 2030, with residential energy storage occupying an important position. By September 2023, Germany has installed more than 1 million residential energy storage systems and expects to add more than 400,000. LFP spot price comes from the ICC Battery price database, where spot price is based on reported quotes from companies, battery cell prices could be even lower if batteries are purchased in high volume. Estimated cell manufacturing cost uses the BNEF BattMan Cost Model, adjusting LFP cathode prices. The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage in November 2025. This milestone represents enough capacity to meet the peak electricity demand of Germany and the Netherlands. For utility operators and project developers, these economics reshape the fundamental calculations of grid.
