

PIENAAR ENERGY (PTY) LTD

Professional introduction of lead-acid batteries for communication base stations

Overview

Telecom batteries for base stations are backup power systems using valve-regulated lead-acid (VRLA) or lithium-ion batteries. They ensure uninterrupted connectivity during grid failures by storing energy and discharging it when needed. They are also frequently used. Lead-acid batteries, with their reliability and well-established technology, play a pivotal role in ensuring uninterrupted power supply for telecommunications infrastructure. High-performance mobile communications networks with LTE (4G) and the new 5G mobile communications standard are key technologies for advancing digitization and are therefore indispensable for the competitiveness of today's business locations worldwide.

Professional introduction of lead-acid batteries for communication

Telecommunication Battery

These batteries consist of multiple battery cells connected in series to form a 48V battery pack. They are maintenance-free (no water addition required), sealed to prevent acid leakage, ...
