

PIENAAR ENERGY (PTY) LTD

**Proportion of wind and
photovoltaic power generation
in the south**

Overview

Led by Iowa, South Dakota, Kansas, and New Mexico, 30 states generated at least 10% of their in-state electricity from solar and wind combined in 2024. Texas, Iowa, and Oklahoma generated the most from. Globally, renewable power capacity is projected to increase almost 4 600 GW between 2025 and 2030 – double the deployment of the previous five years (2019-2024). Growth in utility-scale and distributed solar PV more than doubles, representing nearly 80% of worldwide renewable electricity capacity. This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document. has increased 34%, according to the Energy Information Administration (EIA). South Africa's geography favors wind, hydropower, and solar energy, making them the country's leading renewable sources. To reduce CO2 emissions and local air.

Proportion of wind and photovoltaic power generation in the south

Wind Energy by State , February 2026 , Choose Energy

The following table shows states with significant wind energy generation, the amount (in thousand megawatt-hours) produced in November, and the percentage increase or decrease since ...
