

PIENAAR ENERGY (PTY) LTD

Ranking of China s solar power generation scale

Overview

Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025. China is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. [1]. Note: NEA considers utility-scale solar to include projects of at least six megawatts of installed alternating current capacity. China's National Energy Administration (NEA) released its 2025 power sector statistics on Jan. To contextualize the magnitude, this figure is nearly 4X greater than May 2024's deployment and almost triples the annual solar capacity addition projected for the entire United States in. In H1 2025, the world added 380 gigawatts (GW) of new solar capacity - a staggering 64% jump compared to the same period in 2024, when 232 GW came online. For context, it took until September last year to pass the 350 GW.

Solar power in China

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentives

Photovoltaic research in China began in 1958 with the development of China's first piece of monocrystalline silicon. Research continued with the development of solar cells for space satellites in 1968. The Institute of Semiconductors of the Chinese Academy of Sciences led this research for a year, stopping after batteries failed to operate. Other research institutions continued the development and research of sola...

Ranking of China s solar power generation scale

For instance, the electricity generation from solar power increased from only 22 GWh in 2000 up to 223 800 GWh in 2019, accounting for a 3.05% share in the national power generation mix.
