# **Renewable electricity copenhagen**

## Overview

---

Denmark and Copenhagen have a substantial quantity of renewable energy sources (over half of their electricity is derived from renewables), mostly from their two main sources of renewables - wind farms and biomass (as well as from relatively smaller shares of solar and other. Denmark and Copenhagen have a substantial quantity of renewable energy sources (over half of their electricity is derived from renewables), mostly from their two main sources of renewables - wind farms and biomass (as well as from relatively smaller shares of solar and other. Today, 50 per cent of electricity in Denmark is supplied by wind and solar power. Wind energy is well-established in Denmark, which long ago decided to put the Danish climate's constant breezes and blusters to practical use. Now Denmark produces almost twice as much wind energy per capita as the. In the heart of Scandinavia lies Copenhagen, a renewable energy smart city and a beacon of sustainability and innovation—and a global leader in renewable energy smart city development. Copenhagen's climate goals and smart planning make it a leading example of renewable energy integration in cities. No other city has set such a goal; the closest is Paris, which in 2019 declared its goal of becoming carbon-neutral by 2050 (Garric & Streck, 2024). In this project, it is concluded that Copenhagen plays a key role in this transition.
