

PIENAAR ENERGY (PTY) LTD

Research on operation control of microgrid

Overview

High penetration of Renewable Energy Resources (RESs) introduces numerous challenges into the Microgrids (MG), such as supply-demand imbalance, non-linear loads, voltage instability, etc. Hence, to address these issues, an effective control system is essential. Microgrids (MGs) technologies, with their advanced control techniques and real-time monitoring systems, provide users with attractive benefits including enhanced power quality, stability, sustainability, and environmentally friendly energy. Our researchers evaluate in-house-developed controls and partner-developed microgrid components using software modeling and hardware-in-the-loop evaluation platforms. A microgrid is a group of interconnected loads and. Abstract—The increasing integration of renewable energy sources (RESs) is transforming traditional power grid networks, which require new approaches for managing decentralized energy production and consumption.

Review on recent control system strategies in Microgrid

We explore traditional control methods, such as droop control and Proportional Integral Derivative (PID) controllers, for their simplicity and scalability, but acknowledge their limitations in

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

ENERGY STORAGE SYSTEM

Control and energy management of standalone microgrids in remote ...

This organized synthesis made it possible to compare the work, identification of dominant trends, and recognition of open research questions in standalone microgrid control and energy management.

Research and Analysis of Microgrid Control Strategy

To achieve this goal, we constructed a microgrid control model on a simulation platform and conducted in-depth simulation analyses of the characteristics of the microgrid in two key operating states.
