

PIENAAR ENERGY (PTY) LTD

Single column of mountain flexible photovoltaic bracket

Overview

Solar single column solar mounting bracket is a bracket designed for mountainous and hilly areas. It adopts the integrated design of piles and pillars, with delicate structure, convenient installation, diversified applications and many combinations. Therefore, flexible PV mounting systems have been developed. These flexible PV supports, characterized by their heightened sensitivity to wind loading, necessitate thorough analysis of their static and dynamic responses. Flexible PV te. The utility model is related to photovoltaic bracket fields, more particularly to a kind of single column photovoltaic support structure system, including column, cant beam, photovoltaic module, crossbeam, guide rail, middle pressing sleeve, side pressure set, at least one guide rail is set below. Traditional rigid photovoltaic (PV) support structures exhibit several limitations during operational deployment. According to the configuration requirements, this. The single-column photovoltaic power plant has a wide range of application scenarios, and can be applied in parks, rugged mountainous areas, reservoirs, and other places where traditional methods are not applicable. The new system uses suspension cables to bear the loads of the PV modules and therefore has the characteristics of a long span, light weight, strong load capabilities in each row and 8 modules per row).

Single column of mountain flexible photovoltaic bracket

Flexible photovoltaic bracket end column structure

In short, the photovoltaic fixed and adjustable bracket is an efficient, reliable and flexible photovoltaic support structure, which is of great significance for improving the power

Classification of mountain photovoltaic flexible brackets

Taking a flexible PV bracket with a span of 30 m and a cable axial force of 75 kN as the research object, we investigate the variation patterns of the support cables and wind
