

# Solar container lithium battery BMs communication timeout

Application scenarios of energy storage battery products

## Overview

---

This usually happens when the BMS does not receive any message from the charger for more than five seconds. To troubleshoot, begin by inspecting the charger hardware. Series host device equipped with ReadyRail/ReadyBlock expansion technology. It delivers true closed-loop control and communications with select lithium battery brands in Morningstar's Energy Storage Partner program, deliveredi GS-MPPT-60M-200V, GS-MPPT-80M-200V or GS-MPPT-100M-200V) as the host. When installing a battery system it is important that the battery and the inverter are able to communicate via the battery BMS (battery management system). This can lead to the batteries not obeying the battery. Hyw17 said: "With a good balancing logic my batteries only need about 4 hours a month of balancing time, 304Ah cells and 150mA balancing current. As with any complex system, regular checkups and maintenance are advised to catch any emerging.
