

PIENAAR ENERGY (PTY) LTD

Solar container lithium battery pack voltage is too low

Overview

These signs follow low voltage cutoff after a deep drain, an overcurrent event, cold or hot cell temperatures, or a fault that the BMS reports during its own checks. Power down loads and isolate the battery. LiFePO4 packs deliver steady power when set up well. Many users still meet the same issues in daily use. The sections below address common LiFePO4 battery problems and show how to restore. Now today when I checked the battery I noticed that the voltage is at 12.0 V, which is about 9% SOC according to charts on the internet. May be triggered by high current draw or.

Solar container lithium battery pack voltage is too low

Common Lithium Battery Issues and How To Fix Them

Low voltage in batteries can either be caused by high self-discharge or uneven current. You can solve fix this simply by charging the bare lithium battery using a charger with over-voltage protection.
