

**PIENAAR ENERGY (PTY) LTD**

# **Solar energy storage cabinets stagger electricity consumption**

## Overview

---

These systems are designed to store surplus energy generated by solar panels during the day for use when sunlight is unavailable, such as at night or during cloudy periods. This maximizes self-consumption of your solar energy, reducing reliance on the grid and lowering. Storage helps solar contribute to the electricity supply even when the sun isn't shining. It can also help smooth out variations in how solar energy flows on the grid. The EPA reported back in 2023 that commercial buildings typically throw away around 30% of their total energy usage. Constructed with long-lasting materials and sophisticated technologies inside. Selecting the right solar energy storage system requires proper capacity calculation, discharge depth (DOD), cycle life, and matching solar power generation with storage batteries.
