

PIENAAR ENERGY (PTY) LTD

Solar led lighting street lamp battery durability

Overview

A well-designed solar street light typically lasts 10–20 years ¹ as a system. Expect panels 25–30 years ², LEDs 50,000–100,000 hours (L70), controllers 5–10 years, and LiFePO₄ batteries 8–12 years ³ depending on depth of discharge, temperature ⁴, and sizing margins. Solar street lights are a sustainable lighting solution, but their lifespan depends on battery durability, solar panel efficiency, and maintenance. This guide breaks down each component's longevity and how to maximize it. Battery – Stores the generated energy for nighttime use. LED Light – Powered by the battery to illuminate streets, pathways, or parking. Our solar street lights—including the highly popular 175W Solar Street Light 17500 Lumens — feature high-quality LiFePO₄ batteries, ensuring long-lasting brightness and reliability.
