

PIENAAR ENERGY (PTY) LTD

Solar power generation data display platform

Overview

A Solar Performance Monitoring System is a software which collects, analyzes, and displays real-time data from your solar panels. It is beneficial in tracking generation, detecting faults, and optimising energy output—giving complete visibility into your solar plant's operational. Rather than focusing on a single data source, IAMMETER captures energy flow on both the generation side and the grid side, providing a complete and accurate view of how electricity moves through the system: This data-driven approach helps maximize solar utilization and reduce electricity costs. Get a detailed real-time view of your entire fleet from a single, easy-to use platform. Streamline your operations and minimize system downtime with remote. SolarEdge is a leading solar manufacturer whose solar monitoring capabilities are built into their inverters and amplified using Hark software. Therefore, not only are different inverter types able to be visualized, but cross-vendor visualization is also a possibility, regardless of location and number of systems.

Solar power generation data display platform

Energy Monitoring System Dashboard and Analytics

This system aims to provide comprehensive insights into energy generation, facilitate prompt detection of anomalies, and support data-driven decision-making, thereby enhancing operational efficiency and ...
