Solar power generation gives voice to golden retriever Siri

Overview

In a joint statement given to CNBC (which we've also now received), Apple and Google say they're about to enter a multi-year partnership. Apple will use Google's AI models to power artificial intelligence features, including a next-gen Siri later this year. The move is part of a multi-year partnership between two longtime rivals, and it signals something Apple. Apple CEO Tim Cook yesterday reiterated the structure of its partnership with Google to use Gemini AI models for the next generation version of Siri. During the company's Q1 2026 earnings call yesterday, Apple CEO Tim Cook and CFO Kevan Parekh were asked several questions about Apple Intelligence. Over the past decade, I've watched the voice assistant market evolve rapidly—first with the novelty of Siri, then through continual improvements by Google Assistant and Amazon Alexa. Apple's Siri, despite its pioneering status, has lagged behind in generative intelligence and contextual. Apple is undertaking a significant initiative to redefine Siri, its voice assistant, by integrating advanced artificial intelligence (AI) capabilities, according to recent rumors. Internal evaluations are underway alongside OpenAI and Anthropic models to decide the best fit for Apple's virtual assistant.
