

PIENAAR ENERGY (PTY) LTD

Solar power generation in Tuha Basin

Overview

On November 2, the China Petroleum News Center released news that this year, Tuha Oilfield is actively building a green and low-carbon energy ecosystem. As of October 31, the cumulative power generation capacity of the 110 kV Donghu Photovoltaic Power Station has exceeded 100 million. ermal oil recovery in CCUS-EOR mode. The combustion gas generated by the in-situ combustion employed at Shuguang block was processed and transported to Shuang 229 block ively discussed in the literature. As a result,it is necessary to discuss the mechanis waterflooding improve oil recovery?

As. During the "14th Five-Year Plan" period, the Tuha Oilfield will rely on its resource advantages and follow the working ideas of "clean replacement, strategic succession, green transformation, and demonstration first", actively deploy new energy sources, cultivate new economic growth poles, and use. Tuha Oil Province is located in the eastern part of Xinjiang Uygur Autonomous Region. Its oil and gas fields are mainly distributed in the Turpan-Kumul Basin and Santanghu Basin, with an annual oil production capacity of 1. In recent years, Tuha Oil Province has witnessed remarkable. Sign-in to our platforms to access our extensive research, our latest insight, data and analytics and to connect to our industry experts. Understanding spatial and temporal evolution.

Solar power generation in Tuha Basin

Thirty years' spatio-temporal evolution of

In this study, the desertification degree classification and its driving forces were conducted in the Tuha Basin of Xinjiang, which was a key link between central Asia and East Asia and a typical ...
